PERSONAL PROJECTS

Simple Student Management System

- This project is a basic Angular application designed to help beginners understand the fundamentals of creating, reading, updating, and deleting (CRUD) operations. The project focuses on managing a list of students, allowing users to perform all CRUD operations seamlessly.
- Create: Add new student records with essential details such as name, age, grade, and email. Read: View a list of all students with their details in a tabular format. Update: Edit and update existing student records. Delete: Remove student records from the list. Technologies Used: Angular: For building the front-end application. Bootstrap: For styling the application and creating a responsive layout. TypeScript: For writing clean and maintainable code. JSON Server: To simulate a backend RESTful API for handling data storage and retrieval.

Task Management App

- Angular, TypeScript, Json Designed and implemented a task management application that allows users to create, edit, and delete tasks. Integrated Json for real-time data synchronization and authentication.

Portfolio Website

- Angular, HTML5, CSS3 Developed a personal portfolio website showcasing projects, skills, and resume. Utilized Angular for a responsive and dynamic user interface.
