## Experience (2.5 Years)

Info Tech IT Solutions (Sargodha) Internship

Evolvers-Tech Software house Lahore (6 months)

Elite IT software house UK based (Remote)

Prismatic Technologies Lahore (1.5 year) Currently working here

## Projects:

### 1. Revive Gym Website

Test both admin and user

Write test cases for the website

Complete unit testing done on registration process by using both negative and positive formats Perform frontend testing on the website and admin side also

Perform stripe payment testing for the website subscription module

Perform backend testing to verification of users and subscription plan details

### 2. Big John Website

Perform frontend testing on the website

Ui/UX testing done on the website check complete website alignments

Check all slider animations and scrolling content and also verify complete website links and categories because website have too many parent and child categories

### 3. Mukaber LMS (Gulab Devi)

Check all the permissions and authorization against all types of users

Perform complete UI/UX testing on the LMS and check all the validations on

it Backend testing done to verify user records

Database testing done to verify all Students teacher records save in our database or not

Add new students, teachers, assignments, exams, announcements and assessments to verify that all modules are working properly according to the requirement and act according to their role and designation

### 4. TCG POS / ERP

Add new product and verify all data of added products is fetched properly

Verify products quantity is matched with the added stock in the ERP system

Buy products and verify that products quantity is reduced accordingly or not

Perform regression testing when new deployment is done on the system to check that products buy and generate invoice complete scenario is working properly

Check ERP record and POS record side by side to verify smooth process of buy and sale products, single product or products in bulk

Also check employee availability hours and calculate their payables and remaining cash in hand

#### **5. Thrive tutor's website**

In this website I have write test cases of complete website

Perform all frontend and backend testing buy using Figma

Verify all font size, div size, images and fields validation by using web developer tool

Check all responsiveness on Mobil and tab screen using extensions and real device

All backend frontend testing done on it for payment method strip and zero payment system testing done

Both admin and user side authentication check and also verify SMTP server implementation

#### **6. Book me App**

I have done complete frontend and backend testing on this application to verify all bookings and their status also check admin panel permissions

In this app hotels, cars, doctors booking done also a person can book driver to move their furniture from one place to another and that person can also select how many people they require to load their luggage

I have performed integration testing on it to check all integrated modules and also check driver, doctor and rooms assigning buy admin side

#### **7. Outday app**

It's an app about event management like a person can create his/her event and invite friends also buy tickets and also buy tickets of friends of their friends

I have performed Ui/Ux testing on it to check app is user friendly or not easy to use for all type of users to buy tickets or view event details and their ticket.

#### **8. Technology website (Ecommerce)**

This website is an ecommerce website user can buy car equipment's from this platform

I have check all add to cart process and payments process on this website buy all products and also pay by card and cash on delivery
